

Most Alpine head units are designed to optimize the available internal memory for use with CD-R specifications (700MB) that leads to search limitations as documented in the Owner's Manual. Due to the memory capacity in the head units, there is a limit to the quantity of playlist, artists, albums and songs that can be displayed. For best results, test your iPod at a local authorized Alpine dealer. For suggestions on how to optimize your iPod for in-vehicle use, visit www.alpine-usa.com. The KCA-420i is compatible with 2004 and 2005 Ai-NET head units and supports iPods with the dock connector. Product descriptions are based upon current information at the time of printing, but cannot be guaranteed. All designs, features and specifications are subject to change without notice.
